Detailed Report

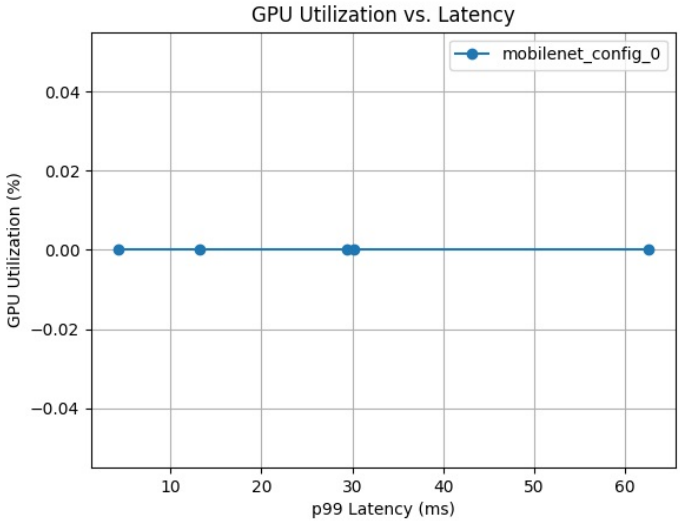

Model Config: mobilenet_config_0

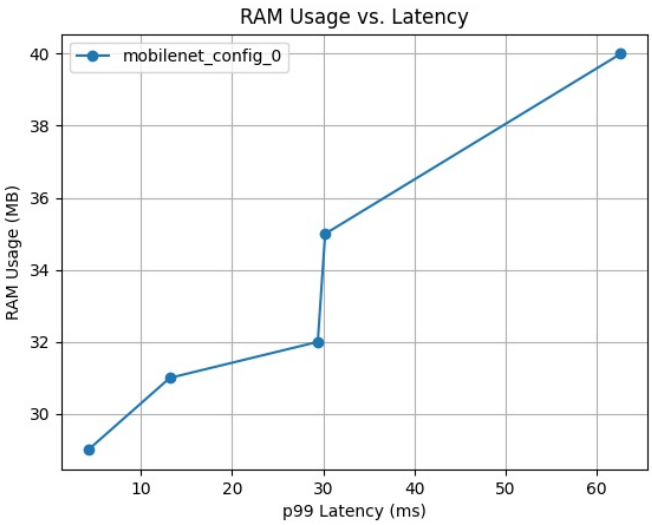

Latency Breakdown for Online Performance of mobilenet_config_0

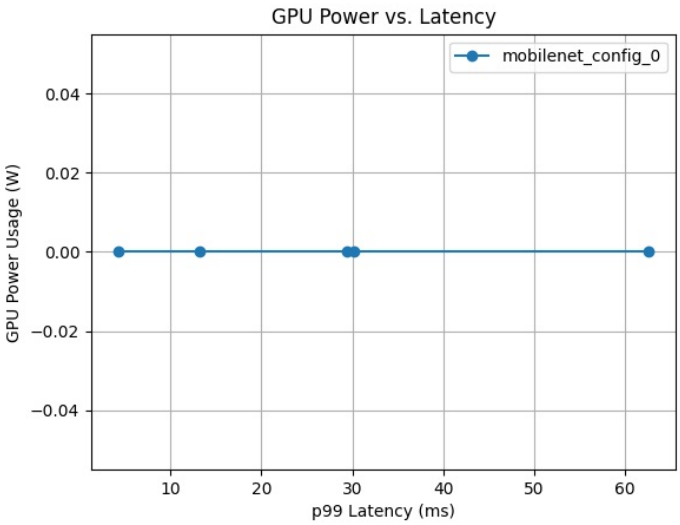

GPU Memory vs. Latency curves for config mobilenet_config_0

GPU Utilization vs. Latency curves for config mobilenet_config_0

RAM Usage vs. Latency curves for config mobilenet_config_0

GPU Power vs. Latency curves for config mobilenet_config_0

Request Concurrency	p99 Latency (ms)	Client Response Wait (ms)	Server Queue (ms)	Server Compute Input (ms)	Server Compute Infer (ms)	Throughput (infer/sec)	Max CPU Memory Usage (MB)	Max GPU Memory Usage (MB)	Average GPU Utilization (%)
16	62.627	53.847	50.142	0.032	3.33	293.468	40.0	0	0
8	30.213	27.522	23.761	0.03	3.395	288.207	35.0	0	0
4	29.403	14.049	10.24	0.033	3.459	282.573	32.0	0	0
2	13.18	6.712	3.079	0.024	3.318	295.232	31.0	0	0
1	4.22	3.392	0.02	0.017	3.12	290.247	29.0	0	0

The model config **mobilenet_config_0** uses 1 CPU instance with a max batch size of 1 and has dynamic batching enabled. 5 measurement(s) were obtained for the model config on GPU(s) with total memory 0 GB. This model uses the platform .

The first plot above shows the breakdown of the latencies in the latency throughput curve for this model config. Following that are the requested configurable plots showing the relationship between various metrics measured by the Model Analyzer. The above table contains detailed data for each of the measurements taken for this model config in decreasing order of latency.
