Detailed Report

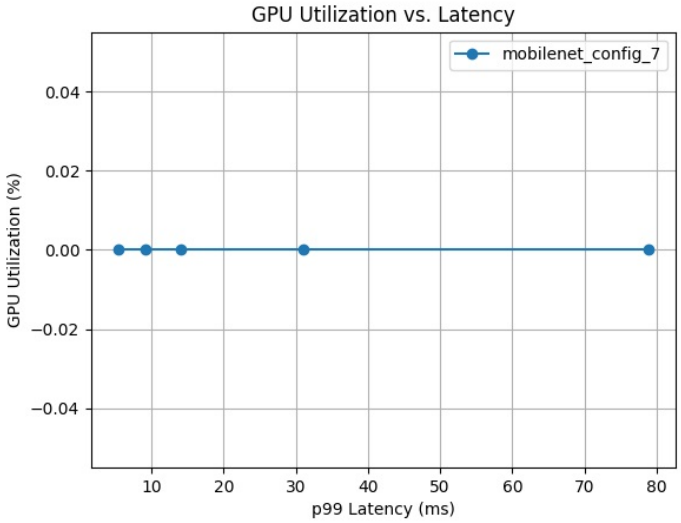

Model Config: mobilenet_config_7

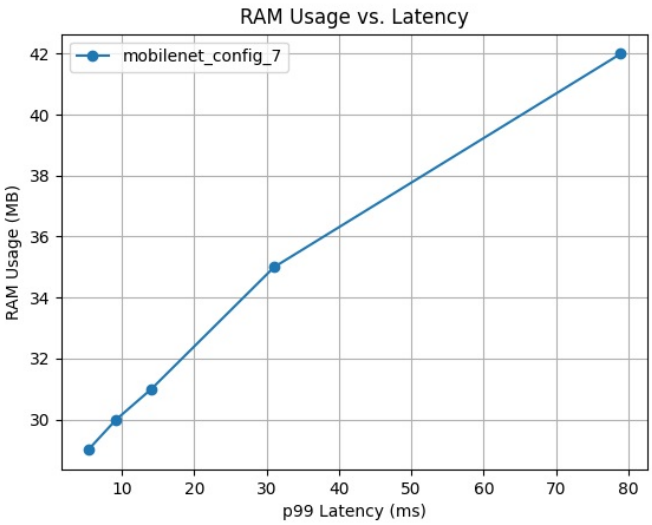

Latency Breakdown for Online Performance of mobilenet_config_7

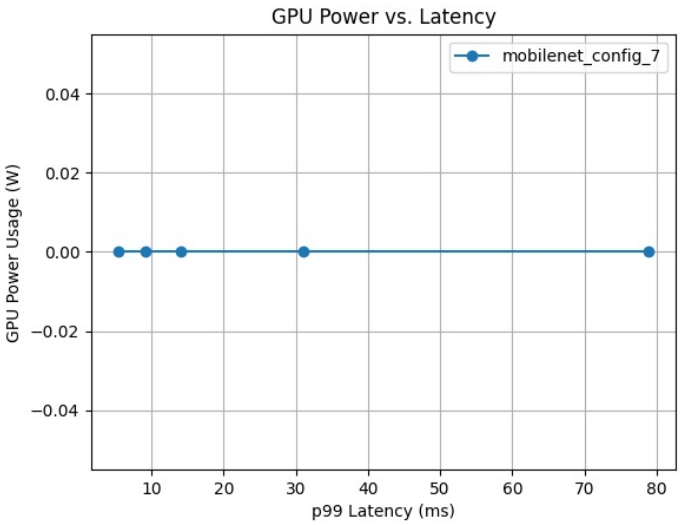

GPU Memory vs. Latency curves for config mobilenet_config_7

GPU Utilization vs. Latency curves for config mobilenet_config_7

RAM Usage vs. Latency curves for config mobilenet_config_7

GPU Power vs. Latency curves for config mobilenet_config_7

Request Concurrency	p99 Latency (ms)	Client Response Wait (ms)	Server Queue (ms)	Server Compute Input (ms)	Server Compute Infer (ms)	Throughput (infer/sec)	Max CPU Memory Usage (MB)	Max GPU Memory Usage (MB)	Average GPU Utilization (%)
16	78.932	49.552	36.359	0.18	12.077	322.547	42.0	0	0
8	31.06	24.107	11.311	0.214	11.719	329.198	35.0	0	0
4	14.1	10.687	4.679	0.083	5.335	371.533	31.0	0	0
2	9.252	7.972	1.057	0.041	6.516	247.904	30.0	0	0
1	5.362	4.644	1.069	0.018	3.289	212.269	29.0	0	0

The model config **mobilenet_config_7** uses 1 CPU instance with a max batch size of 4 and has dynamic batching enabled. 5 measurement(s) were obtained for the model config on GPU(s) with total memory 0 GB. This model uses the platform .

The first plot above shows the breakdown of the latencies in the latency throughput curve for this model config. Following that are the requested configurable plots showing the relationship between various metrics measured by the Model Analyzer. The above table contains detailed data for each of the measurements taken for this model config in decreasing order of latency.
