Detailed Report

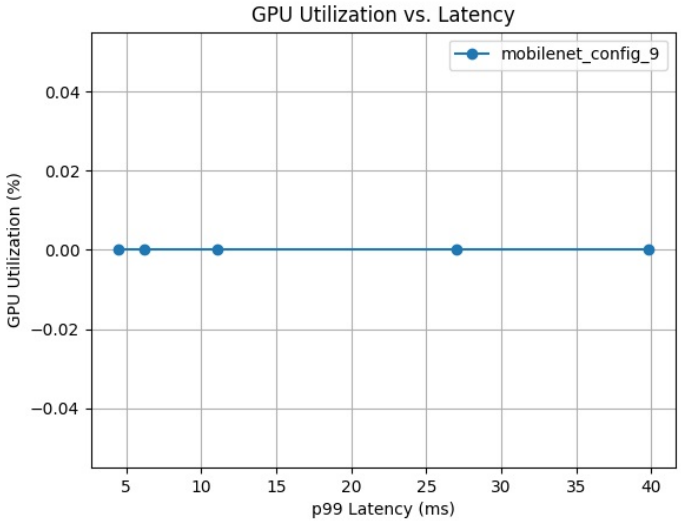

Model Config: mobilenet_config_9

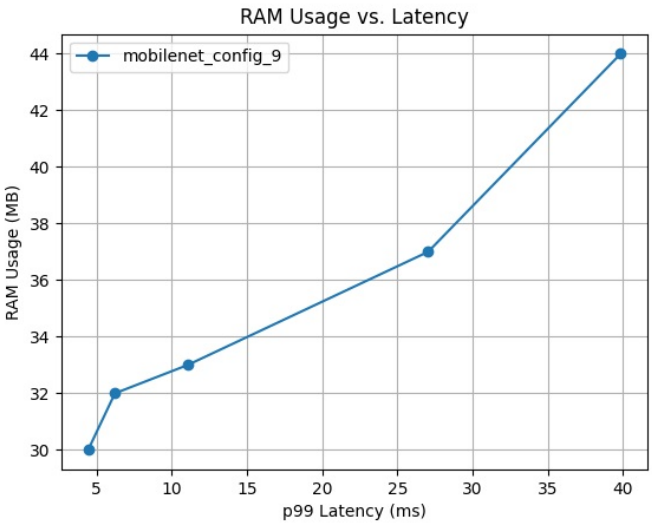

Latency Breakdown for Online Performance of mobilenet_config_9

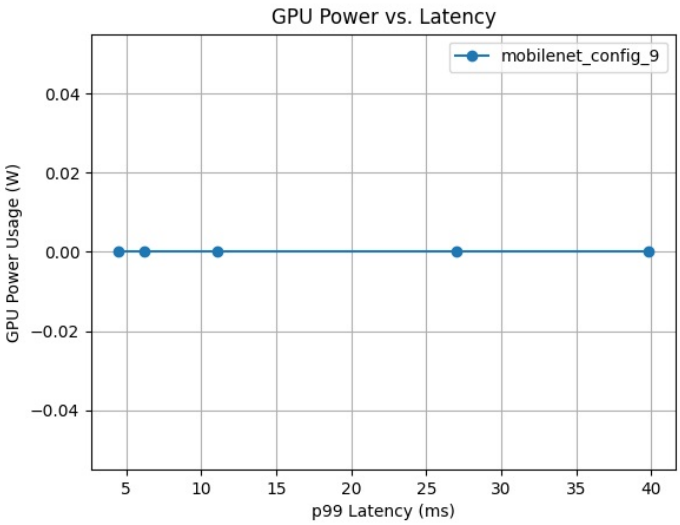

GPU Memory vs. Latency curves for config mobilenet_config_9

GPU Utilization vs. Latency curves for config mobilenet_config_9

RAM Usage vs. Latency curves for config mobilenet_config_9

GPU Power vs. Latency curves for config mobilenet_config_9

Request Concurrency	p99 Latency (ms)	Client Response Wait (ms)	Server Queue (ms)	Server Compute Input (ms)	Server Compute Infer (ms)	Throughput (infer/sec)	Max CPU Memory Usage (MB)	Max GPU Memory Usage (MB)	Average GPU Utilization (%)
16	39.842	35.023	30.071	0.04	4.329	452.426	44.0	0	0
8	27.04	17.599	12.608	0.039	4.347	450.815	37.0	0	0
4	11.06	8.774	3.769	0.035	4.356	450.718	33.0	0	0
2	6.231	4.647	0.031	0.027	4.231	422.452	32.0	0	0
1	4.45	3.847	0.022	0.023	3.538	256.252	30.0	0	0

The model config **mobilenet_config_9** uses 2 CPU instances with a max batch size of 1 and has dynamic batching enabled. 5 measurement(s) were obtained for the model config on GPU(s) with total memory 0 GB. This model uses the platform .

The first plot above shows the breakdown of the latencies in the latency throughput curve for this model config. Following that are the requested configurable plots showing the relationship between various metrics measured by the Model Analyzer. The above table contains detailed data for each of the measurements taken for this model config in decreasing order of latency.
